Apache NiFi is a software project from the Apache Software Foundation designed to automate the flow of data between software systems. Leveraging the concept of Extract, transform, load, it is based on the "NiagaraFiles" software previously developed by the US National Security Agency, which is also the source of a part of its present name - NiFi. It was open-sourced as a part of NSA's technology transfer program in 2014. The software design is based on the flow-based programming model and ...
