The esophagus, ostensibly a simple tubular structure whose functional role often is minimized and even ignored, is, in reality, a highly complex viscus. The problems associated with disorders of the esophagus are not only related to the usual entities which may be anticipated in any portion of the gastrointestinal tract, but include in a major fashion the functional mechanisms indigenous ...

Magnetic resonance is the imaging modality of choice for studies of the orohypopharynx, floor of the mouth, or tongue base. The superiority of MRI soft tissue contrast can demonstrate intra- and extraorgan spread of tumor beyond that of CT. Use of T1- and T2-weighted pulse sequences allows better discrimination of

MRI of the floor of the mouth, tongue and orohypopharynx.
