The Big Splat, or How Our Moon Came to Be Dana Mackenzie (John Wiley & Sons, 2003). 232 pages. ISBN 0-471-15057-6. \$24.95. THE GLORY DAYS OF NASA'S APOLLO lunar-landing program are fading from our collective memory, but the revolution it triggered in lunar science continues to reverberate more than 30 years later.

The Big Splat, or How Our Moon Came to Be. - Free Online ...

The Big Splat is an examination of the modern theory that an object the size of Mars collided with the early Earth to create the Moon, but the book reaches back to the very foundations of human thinking about how the Moon came to be. In writing the book, Dana Mackenzie took on the added challenge of treating the ancient past and the modern scientific era alike, both thematically and descriptively.

The Big Splat, or How Our Moon Came to Be: Physics Today ...

The "big splat" hypothesis on how the Earth's Moon came to be, is the leading contender for explaining how our near double planet system came to be. Nicely written for those wanting a basic place to start.

"The Big Splat: Or How Our Moon Came to Be" by Dana Mackenzie is a concise and exceptionally readable account of how a significant but divisive scientific question came to be settled through the investigation of the Moon made possible by sending human and robotic missions there in the 1960s and 1970s.

Amazon.com: The Big Splat: Or How Our Moon Came to Be ...

The Big Splat Theory helps to explain that. According to the theory, two moons were formed roughly 4.5 billion years ago, when the Earth collided with another space body, roughly the size of Mars. The ensuing debris formed two moons, which orbited Earth and usually rose in the sky together, the smaller one trailing the larger one.

The Big Splat Theory | Actforlibraries.org

The Big Splat theory is now widely accepted as an explanation of how the moon was formed. Previous theories had also suggested that the moon was once a part of the Earth, but exactly what caused it to break away from the Earth was never fully explained.

The Origin of the Moon is Explained by the Big Splat ...

The "Big Splat" refers to the overwhelming event which much evidence indicates really did create the moon - the oblique collision of another planet (the impactor) with the earth over 4 billion years ago, shortly after the genesis of the solar system.

The splatter randomly points to someone and shouts "SPLAT!" The player pointed to must duck down; then the two players on either side of the "ducker" must "splat" each other by pointing to the other and saying "SPLAT!" The last one to splat sits down, and the player ducking stands back up.

Splat | Playworks

Science journalist Dana Mackenzie traces the evolution of this theory, one little known outside the scientific community: a Mars-sized object collided with Earth some four billion years ago, and the remains of this colossal explosion-the Big Splat-came together to form the Moon.

The Big Splat, or How Our Moon Came to Be: A Violent Natural History eBook: Mackenzie, Dana: Amazon.com.au: Kindle Store

The Big Splat, or How Our Moon Came to Be: A Violent ...

The giant-impact hypothesis, sometimes called the Big Splash, or the Theia Impact, suggests that the Moon formed from the ejecta of a collision between the proto-Earth and a Mars-sized planetesimal, approximately 4.5 billion years ago, in the Hadean eon (about 20 to 100 million years after the Solar System coalesced). The colliding body is sometimes called Theia, from the name of the mythical ...
